

RRDG Registration Metrics Deutsch / English

v1. 2020-02-28

States of a Domain Name

Registered - A domain name that has been assigned to a registrant in the registry database.
Delegated - A domain name that is registered (see definition “registered”) and included in the zone file.
Registry suspended - A domain name that has had its DNS control (temporarily) taken over by the registry without altering its registrant information.
Pending release - A domain name after an expiry or delete event, but not available for re-registration. This includes redemption/quarantine phases.
DNSSEC enabled - A domain name that has DNSSEC key material included in its registration.
Locked - A domain name which has a lock[1] product from the registry applied to it.
Internationalised domain name (IDN) - A domain name that includes at least one non-ASCII character.

Events and actions

Expiry - When a domain name comes to the end of its contracted registration period.
Delete - When a domain name is actively deleted with a delete request.
Release - When a domain name transitions from pending release and becomes available for registration again.
Restore - When a domain name transitions from pending release to its former state.
Drop-catch - The action of registering a domain name within 24 hours after it was released.
Create - When a domain name is successfully registered via a create request.
Renew - When a registered domain name has its registration period extended (either explicitly or implicitly)
Expiry - When a domain name comes to the end of its contracted registration period.
Registrant/Inhaber Wechsel – Eine Domain wird von einem Registranten (Inhaber) zu einem anderen übertragen.
